Karachi, Pakistan

PERSONAL PROJECTS

DAM FLOOD MONITORING SYSTEM | FYP

- The "Dam Flood Monitoring System" utilizes IoT technology to continuously monitor dam surroundings for potential flood conditions. This project integrates various sensors and a web application for real-time data visualization, enabling automated alerts to authorities.
- With a focus on enhancing dam safety and disaster preparedness, the system empowers stakeholders with timely insights for informed decisionmaking. Through the use of ESP8266, sensors, and web technologies, it offers a robust solution for minimizing flood risks and improving overall infrastructure resilience.

Find Your Helper | Website

- The Website role is used for admin and users. The admin role is to perform changes on services and see transactions on every branch. The user's role is to select services as per requirements and the report (receipt) is generated.
- Web Application is made using HTML, CSS, JS, MY SQL Database

Edudary. pk | Website

- The website is designed with education in consideration, allowing students quickly determine what they want to learn.
- Applications, PLUGGING, Elementor plugging, and WP Form are used on the WordPress website.
